Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) -

collaboration with the European Drosophila melanogaster BAC on trp://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Drosophila melanogaster.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 1sogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library or filters for hybridization from the BACRAC Resource Center can be found at http://bacnac.med.buffalo.edu/Afrosophila bac ben

                                                                                                                                     Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library or filters for hybridization from the BAC clones, the entire library or filters for hybridization from the BACAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        281

                                                                                                                                                     ORGANISM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPGI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the ibrary and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk . This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

17-NOV-2000
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, and polynucleotides may be used to prevent.
                                                                                                                                                                                       Disclosure;
                                                                                                                                                                                                                      Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and merastasis.
                                                                                                                                                                                                                                                                                               Rosen

                                This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoletic antigen genomic sequences from the present invention. AAK54942 to AAK5490 and AAM82169 represent sequences used in the exemplification of the present invention

(I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                             Human ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, use for detecting presence of prostate cancer, stage of prostate cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for assessing whether a patient is afflicted with ovarian cancer by comparing: (1) the expression of a marker (1) (see AF98594 to AF98593 in a patient sample; and (2) the sample, where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (1) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (1) assessing and treating ovarian cancer; (2) making isolated hybridoma, which produces an antibody useful for ovarian cancer assessment; and (3) inhibiting ovarian cancer in a patient. AAF98573 to AAF98593 represent human kinase marker primers and probes which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and concegenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-ollyomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an carray for analysing diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or properties or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters which differences serving as basis for diagnosis and/or parameters which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-Cp6-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The meth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate temethod for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                          Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                 New nucleic acid fragments from chemically treated angiogenesis-associated genes, useful for determining status, e.g. in diagnosis or treatment of cancer -
                      The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis associated genes (i having sequences (ABO66971-ABO67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or
                                                                                                                                                                                                              status, e.g.

CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), by detecting the level of expression level in an unactivated CC (GC, where differential expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent Capable of modulating (M2) GA by contacting GC with an agent Capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC evel of expression in a sample of the tissue of gene(s) from GS, where CC (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression of the gene is indicative of inflammation; where CC (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject to a pathogen or constanting a tissue having CC inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. M1 is useful for detecting a tissue having CC inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. M1 is useful for adetecting GCA; M2 is useful for CC detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, cc and allergic response in a subject was agent capable of modulating GCA preferably in a niflammation, thrombosis, cardiac reperfusion injury, renal conflammatory bowel disease, Crohn's disease, ulcerative colitis, conflammation, protozoal infection, fundal infection, with infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; SEQ ID No 1294; 114pp; English

CC This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpC-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cycosine (C) but not methylated C, to uracil. then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders cof the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide CC polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                       AAT61396, and AAT61405-T61411 represent coding sequences for different CC isoforms of MACH. MACH is a binding protein for the mediator of receptor CC toxicity (MORT-1) protein. MORT-1 binds to the FAS ligand receptor CC (FAS-R) death domain region, and triggers part of the cell death CC signalling cascade in mammalian cells. Vectors containing these CC sequences, the encoded proteins, and antibodies (Ab) against them are CC used to modulate the effect of FAS-R ligand or TNF on cells that carry CC FAS-R or p55-R. This is specifically for treating tumours, HTV-infected CC cells or other diseased cells, by control of apoptosis/programmed cell CC death. The encoded proteins are mediators of the cell death pathway CC initiated by TNF and FAS-R binding, i.e. it mimics or enhances the CC effect of MORT-1, e.g. in cases of septic shock, graft rejection and CC acute hepatitis, sequences encoding antisense molecules or ribozymes, or CC ab against the protein, are used. Compounds that inhibit MACH are CC potentially useful for controlling MACH activity e.g. in cases of CC autoimune disease, oligodendrocyte death in multiple sclerosis or CC AIDS-inhibited T-cell suicide. The MACH proteins can also be used to CC isolate and characterise other proteins and receptors involved in CC signalling and for ab production. The Ab can be used to purify the new CC proteins and for diagnosis of conditions involving abnormal function of CC FAS-R mediated cellular effects.
                                                                                                                                                                                                      Query Match

The present sequence is a DNA encoding human Caspase-8 also known as CC MACH, FILCE and Mch5. Caspases are a family of cysteine proteases, that CC participate in the initiation and execution of apoptosis. Caspases exist CC as pro-enzymes, activated by cleavage into a large and small subunit. CC occurring after specific aspartic acid residues within the pro-enzyme sequence. The present invention relates to a method for functional CC cloning of genes encoding proteins or enzymes involved in proteolytic cleavage. The invention is based on the use of caspase expression CC cassettes comprising the coding sequence of a proteolytic cleavage site CC flanked by sequences encoding two caspase subunit, a fusion polypeptide comprising a first and a second caspase subunit, separated by a cleavage comprising a first and a second caspase subunit, separated by a cleavage containing fusion polypeptide is used to identify a mutant cell line deficient in an enzyme of interest and is also useful for diagnosis and containing fusion of a polypeptide (e.g. Cathepsin B or urokinase, controlled to superession of a polypeptide (e.g. Cathepsin B or urokinase, controlled to superession of a polypeptide (e.g. Cathepsin B or urokinase, controlled to superession of a polypeptide (e.g. Cathepsin B or urokinase, controlled to superession of a polypeptide (e.g. Cathepsin B or urokinase, controlled to the tumour cells). DNA encoding fusion

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cantivity, and can be used in gene therapy and vaccine production. (I) CC arctivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic contents and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK85492 to AAK8793 and AAM82169 cranerase research executions and the areasent invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                   CRAK54951 to AAK64702 encode the human immune/haematopoietic.antigen (I) cantino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) corrections and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) colored to the second to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, concerts and cancer metastases of heematopoietic antigen genomic concerts and cancer metastases of heematopoietic antigen genomic concerts from the present human immune/haematopoietic antigen genomic concerts and cancer metastases of heematopoietic antigen genomic concerts the present human immune/haematopoietic antigen genomic concerts the present human immune/haematopoietic antigen genomic concerts and cancer metastases of heematopoietic antigen genomic concerts and cancer metast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                expresses an mRNA and protein product. The promoter Region 1 sequence is located upstream (5') to exon 1, which is the alternatively-spliced 5' untranslated region (UTR) that is less commonly used. The promoter Region 2 sequence is located downstream (3') of exon 1 and upstream of exon 2, which is the more commonly used 5' UTR. The CASP8 gene has been localized to human chromosome 2q33-34. The methods are used to diagnose or prognose cancer. Cancer is treated by administering a vector that expresses a gene encoding functional CASP8 in cells. The cancer that is diagnosed or treated is a tumour in which a myc gene is amplified such as a neuroblastoma. Aggressive neuroblastoma juvenile neuroblastoma (preferred) small-cell lung carcinoma, non-small-cell lung carcinoma, colorectal carcinoma, or uterine cervical carcinoma can be diagnosed with the new method. A kit for screening for a compound that induces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inactivation of a caspase-8 (CASP8) gene is determined by detecting a modification of CASP8 genomic DNA that results in inactivation of the gene. CASP8, a cysteine protease, is part of the death inducing signaling complex (DISC) associated with the Fas receptor. CASP8 is inactivated in cancers, and plays a role of a tumour suppressor gene. The CASP8 promoter region sequences, in particular Region 1 and Region 2, are crucial to the design and execution of the genomic methylation PCR analysis of CASP8 gene inactivation. Methylation PCR can be used to examine even minute amounts of patient material to demonsrate whether the CASP8 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   death-receptor-mediated apoptosis in cells containing an inactivated CASP8 gene is also provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inactivation of a caspase-8 (CASP8) gene is modification of CASP8 genomic DNA that resul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprising

## CASP8; caspase-8; promoter; Region 1; inactivation; methylation; Cysteine protease; tumour suppressor; chromosome 2q33-34; neuroblastoma; cancer; death receptor; apoptosis; cytostatic; gene therapy; ss. Homo sapiens. CASP8 promoter Region 1. 31-OCT-2000 AAA51792; AAA51792 standard; DNA; 670 BP (first entry)

ALIGNMENTS

Detecting inactivation of a caspase-8 (CASP8) gene for diagnosing prognosing cancer, comprises detecting a modification of genomic I Kidd WPI; 2000-452423/39. (SJUD-) ST JUDE CHILDREN'S RES 30-DEC-1999; 06-JUL-2000. WO200039347-A1 31-DEC-1998; Lahti JM, 98US-0114308 99WO-US31280 HOSPITAL.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         512 GGAGTAAAGTTTACCCTGCAGTTCCTTCTGTGGTGAAGTTTTCTCTTTCTCTCGGAGACC
                                                                                                                                                                                                                                                                                              Submitted (28-JUL-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 ISA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jun 20, 2000 this sequence version replaced gi:8573783.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             98;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AL136307 186882 bp DNA linear PRI 01-AUG-2000 Human DNA sequence from clone RP3-380B8 on chromosome 6p24.1-25.3 Contains a gene encoding the protein Neuritin, which is involved in promotion of neurite outgrowth, a Pyruvate kinase (PKM2) pseudogene, a novel mRNA, 4 CpG islands, ESTs, STSs and GSSs,
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
                                                                                                                                                                                                                                                       annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Brown, J
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Mammalia; Eutheria; Primates;
